-login page only asks for username to log in a user

    -usernames have to be unique

-Admin screen is only visible if a username of "Admin" is entered

-Delete user button tries to delete currently selected user

-Delete and Add user buttons make changes to a common file that persists through exiting the program and logging out

Folder icons will be displayed in the middle of the window

    -double clicking a folder will open it up

All photos belonging to the album show up as thumbnails on the left side
  -Clicking on a picture will show it on the right-hand side

All buttons that reference a picture use the currently selected picture that is being shown on the right

All changes persist through logout and exits

The caption is an editable text box that updates the stored value every time an edit is made

Add photos opens up the file chooser window to select what picture gets uploaded

Date is recorded as a special tag that is not editable

When searching based on date, only the fields on the left are used

      If only one date is entered, default date for Start Date will be 1/1/1970 (Epoch date) and default

      Date for End Date is the Current time

When searching based on tag, only the fields on the right are used

      Date can be used as a tag to search for but only a specific date (ex. Date: 10/10/19)

Very similar to the album viewer but instead of viewing pictures from an album, it views pictures that satisfy the search results

-Add photo and move photo not present on this screen (won't make sense)

Can save the results as an album (saving brings you to the new album created)

Deleting a tag repeats the search to see if the photo still belongs
